

LA VALENTINA

HARVEST 2024

The absence of snow in winter set the stage for the 2024 vintage. In previous years, rain in spring helped to alleviate dry conditions, but not in 2024. Throughout the entire interior and most coastal regions, Abruzzo suffered through drought from spring through August. Rain finally arrived late in the season yet only amounted to 50% of the annual average. Even in coastal territories with more precipitation, 2024 was an arid and warm vintage. Expect drastically reduced quantities across the board.
